Installation of OpenCV in python on Window

Prerequisities:

I am expecting that you have already installed Python, Numpy and Matplotlib.

Steps to install OpenCV in python on Window

- Open this link **http://opencv.org/releases.html** to download OpenCV Latest version
- Click on win pack. And download it opencv-2.4.10.exe.
- After downloading, extract it under a simple location like C:\. I am using version 2.4.10
- Goto **opencv/build/python/2.7** folder.
- Copy **cv2.pyd** to **C:/Python27/lib/site-packages**.

Testing the Configuration on new Python project

Open Python IDLE and type following codes in Python terminal.

```
>>> import cv2
>>> print cv2.__version__
```

If the results are printed out without any errors, congratulations !!! You have installed OpenCV-Python successfully.
